

WHY ENVIROSEAL STABILIZERS ON OUR WALKING TRAILS ?

After years of testing, Enviroseal has proven to be a sound investment. Our sealers are not affected by winter cold or summer heat. Enviroseal stabilizers retain all its superior engineering qualities. There are no other products on the market today that can compete with our high standards. The projects below have proven to be superior to any other product that has been used.

This is New York's Central Park where Enviroseal was applied over a 4" bed of 1/4" crushed granite stone. During the last four years and (3) three freeze thaw cycles and over nine (9) million joggers and **still no dust and VERY LITTLE maintenance.**

Rev: 06-03

From hiking trails in the Rocky Mountains to the Appalachian Trail winding down through the Eastern part of our Country, Enviroseal Sealers and Dust Palliatives are working for you. Each of our products are scientifically engineered and designed to be compatible with **ALL** soil conditions.

THE FEATURES AND BENEFITS FOR USING ENVIROSEAL STABILIZERS

- * Easy to install with locally available equipment
- * Economical to use about 1/2 the cost of asphalt
- * Very little maintenance
- * ADA Approved Design
- * Listed with the Center for Disability
- * Enviroseal (3) three year Warranty 100%
- * Technicians available to instruct your workers on installations
- * Can be installed as a running path or ADA walking trail
- * As a running path the surface is specially designed so it will give under foot just enough so as to not promote the occurrence of shin splints, or joint injury,

The Enviroseal Recommended Recipe For Building The Perfect Trail or Pathway.

Excavate a pathway at least 4" deep to the desired width. Fill the excavation with 1/4" minus crushed stone. Rake or use a pull / tow behind asphalt paver to level the surface. Spray ENVIROSEAL with a 4.1 mix ratio. Compact with a 3 to 5 ton vibratory roller SEE ADA ON FRONT PAGE OF THIS WEB PAGE FOR FULL DETAILS.
