

Enviroseal Corporate Profile

Enviroseal Corporation is a premier specialty chemical materials company with an excellent reputation among our customers, our suppliers and our communities. We are a responsible company that operates at the highest levels of integrity and ethics.

Enviroseal Corporation measures its progress by how well we perform in the eyes of five key stakeholder groups, each of whom have a strong voice in determining our success - the customer, the employee, the owner, the community, and the process.

Enviroseal manufactures environmentally friendly polymers that enhance geotechnical and construction engineering characteristics and a line of high quality sealers. We pride ourselves in supplying low V.O.C. (volatile organic compounds) products that perform to the highest engineering standards while exceeding the requirements by both the U.S. EPA and the E.U. environmental guidelines.

Over the last several years we have developed a wide range of products that are superior in application to Concrete, asphalt roofs, and other surfaces. Our sealers have been formulated to eliminate the future growth of mold, mildew and algae that is prominent in humid areas of the world. The sealer division has seen significant growth in the last few years. We are able now to offer low VOC compliant products exceeding all EPA standards for today and in the future. All our products that have been thoroughly field tested and are used worldwide including military, heavy construction, industrial, and building contractors.

New for 2010 is the result of over two years of R&D to perfect an entirely new formulation Dust control agent we named EDC. This proprietary formulation; once applied will last up to one year depending on heavy traffic. We have named it EDC and it was specifically designed for the military of the world to eliminate dust signatures. It is starting to gain wide acceptance in the construction and solar industries. Last September we were tested at the Yuma test grounds of the Department of Defense; here it was found that 1/3 less was used to do the same job as other competitors.

Our Corporate Headquarters is located in Port St. Lucie, Florida, with a branch office in Manila, Philippines. We employ a network of highly skilled distributors worldwide. All ingredients used in the manufacturing of our products are of the highest quality and conform to ISO 9000, 14000, EPA and LEEDS / Green Construction Guideline standards, and the new ECHA standards of the EU.

The President, Thomas Stevens and Vice President, Andy Stevens, along with their staff of civil, chemical, and research consulting engineers supply a worldwide distribution network. This professional group brings in excess of 100 years experience to the construction industry and the development of chemically modified soils. Our Soils Engineering staff is proficient in both English and Spanish. Certified 3rd party independent laboratories that are ASTM accredited are used to perform testing specifically for our customers and the environment we are trying to protect through innovative engineering applications.

Enviroseal Corporation is committed to being a good neighbor and a responsible corporate citizen by using only environmentally safe products. It was founded in 1994 in Palm Beach, Florida with the intention of developing a cost-effective and environmentally friendly alternative to soil conditioning, sealing and conservation.

Enviroseal is currently working in conjunction with the United States Military, United Nations, United States Environmental Protection Agency, the United States Forestry Service and the Florida, New York and Washington State Park Departments and various international government agencies. The Vision of Enviroseal is to manufacture innovative superior products for the geotechnical and coatings industries while maintaining a cost effective alternative to conventional engineering practices.
