

Katrina Update

September 6th, 2005 - Mobile, Alabama

Mr. Fink's home after Katrina

Mr. H. Fink of Mobile, Alabama recently had Roof-Guard 101™ applied to his home about 30 days prior to Hurricane Katrina hitting the Gulf. There are 25 homes in this coastal community that experienced winds of 100 to 125 mph during the storm. His home is the only one that experienced **NO DAMAGE**. These were similar to the wind speeds that we experienced here in Florida last year during Jeanne & Francis.

Mr. Fink Says:

I am a firm believer that Roof-Guard 101™ was responsible for saving my roof and our precious belongings, unlike the misfortunes of many of my neighbors.

Typical of the neighbors roofs, all 24

Thank you,
Harold

These homes were only a few years old but had 60 mph rated shingles like in most of Florida. Here is just one of the 24 remaining roofs not treated in Mr. Fink's neighborhood. Mr. Fink and Mr. Platt are currently working with his neighbors to install the Roof-Guard, so their roofs can be protected as well.

R&A Platt Roofing Co.

Randall Platt Owner Says:

Our family has been in the roofing business here in the Mobile area for over 40 years. Roof-Guard 101™ has surpassed my expectations. I am now a proud installer for Enviroseal Corp. I am highly recommending this product to all my past and new customers.

When shingles are peeled away not only does the roof get damaged but so do lives.

Thank you Enviroseal.

Randy

Insurance statistics state, between 50 and 75% of Hurricane losses are caused by roof failures and water intrusions through the roof after roof covering fails, causing billions of dollars in damage. The worst damage can be the rapid growth of mold and mildew causing a serious health hazard. This all can be prevented.
